

PalmSource® Web Browser 3.0

PalmSource Web Browser 3.0 has been designed to provide mobile operators and Palm Powered™ licensees with an unprecedented browsing experience tailored to their unique Palm Powered smart mobile devices for the benefit of their web content and multimedia savvy mobile users.

Product Overview

PalmSource Web Browser 3.0 is designed to address the needs of a variety of mobile devices from PDAs to smartphones and gives mobile users unprecedented graphics and navigation capability in the delivery of rich media content. It further establishes Palm OS Cobalt as the platform of choice for connected devices and provides for an optimal user experience in a wireless environment.

Based on the ACCESS NetFront™ core, PalmSource Web Browser 3.0 is optimized to offer a rich, powerful experience that takes advantage of the ease-of-use of the Palm OS platform. Smartphone or PDA users with dial-up, Bluetooth or high-speed connections, such as 802.11, GPRS, and EDGE on handhelds, can browse Web and WAP pages to shop, download games and music, watch and listen to news, remotely connect to corporate intranets and access email.

Enterprises and wireless shoppers will benefit from increased security with support for SSL (Secure Socket Layer) or TLS (Transport Layer Security) for secure communications and

e-commerce transactions. PalmSource Web Browser 3.0 also supports optional proxy settings for use in environments that require a proxy server.

PalmSource Web Browser 3.0 is designed to offer flexibility for hardware manufacturers to customize the interface based on the needs of their customers and wireless operators, by changing parameters like the default home page, pre-provisioning bookmarks, or adding navigation mechanisms specific to their mobile devices.

Product Details
